What is in this deck

01	The opportunity	Why sealed product, and why this market
02	The strategy	Mandate, process, valuation and risk
03	Track record	Performance, risk, attribution and holdings
04	Platform	The data and reporting behind every mark
05	Appendix	Benchmark, terms and disclosures

HOW TO READ THIS DECK

Every figure is generated from the fund's own ledger and its price lake on 2026-10-10. Nothing is typed by hand, nothing is modelled, and a position the price feed does not cover is shown at cost rather than estimated. The same numbers are published daily at urzatower.github.io/capital.

WHAT THIS IS NOT

This is not an offer, a solicitation or investment advice, and no interests are available. It is a record of how one book is run, published with the discipline an allocator would expect.

0 1

The opportunity

Sealed product is the only version of this asset whose supply can fall but never rise.

01

Supply, float and the reprint cycle

02

What the sealed market has done

03

Where the value sits today

An asset with a supply schedule

Why sealed product, in three parts

PRINT RUN: FINITE

Supply ends on a schedule

A set is printed for a window and then never again. Sealed product is the only form of the asset whose float can shrink but never grow.

ONE-WAY ATTRITION

The float shrinks every day

Every box opened leaves the sealed market permanently. Demand from players is a consumption of supply, not a transfer of it.

WIDENING BUYER BASE

Demand arrives from outside

Crossover sets bring audiences who never played the game: film, comics and video game collectors bidding for the same boxes.

THE ASYMMETRY

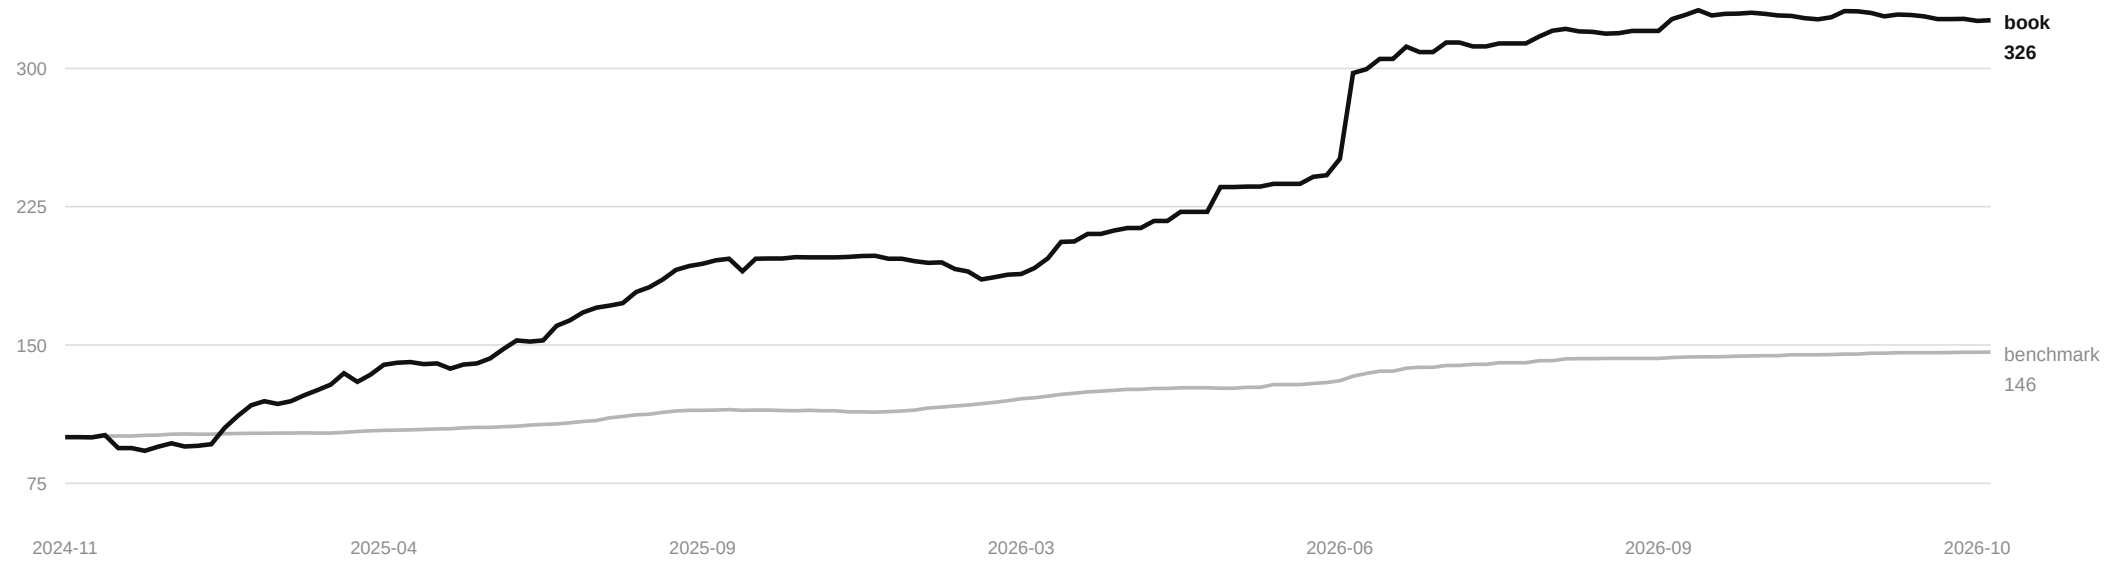

A sealed box has a floor that is not zero, because the cards inside keep a resale value even in a bad outcome, and an upside that depends on how many boxes survive unopened. That shape is rare in collectibles and it is the reason this book exists.

THE HAZARD, STATED UP FRONT

Reprints. A publisher can reset the price of sealed product by printing the same cards again in a new frame or a new set. This is tracked per set, it is the main risk in the book, and it is why entries are small, dated and spread across release cycles.

The sealed market

The benchmark index against the book

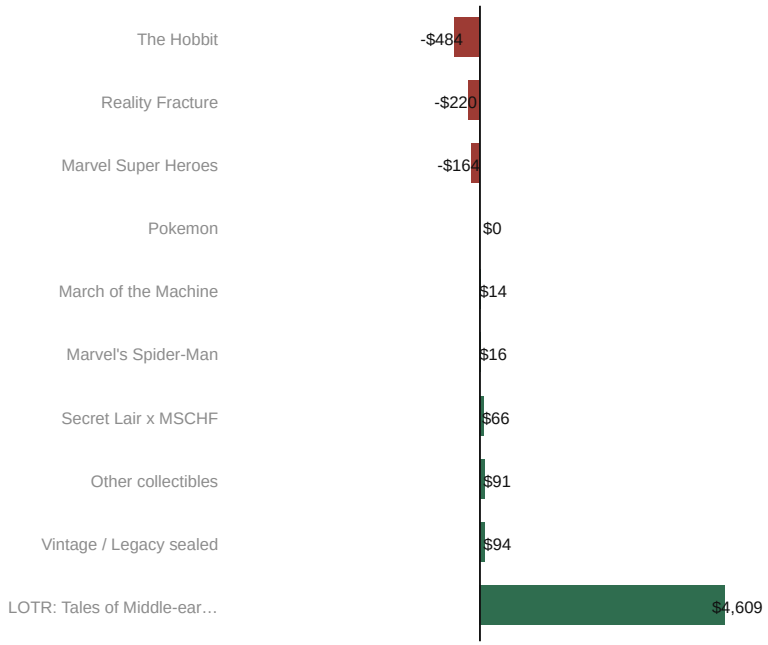

SEALED MARKET INDEX	BOXES IN THE INDEX	PRICE HISTORY	THE BOOK
+46.2%	251	from 2024-02-08	+226.1%
since 2024-11-01	every Magic booster box the feed prices	weekly archive, then daily	+179.9% against the market

The grey line is the sealed market itself, a capped value-weighted index of every Magic booster box the price feed covers, rebased at the book's inception. The black line is this book. Holding the market in sealed boxes was a positive trade over the period; selection is what separated the two lines.

Where value concentrates

By strategy bucket, on marked value

RETURN BY STRATEGY BUCKET

WHERE THE VALUE SITS TODAY

BUCKET	COST	VALUE	WEIGHT	P&L
LOTR: Tales of Middle-earth	$3,142	$7,751	46.3%	+146.7%
Vintage / Legacy sealed	$3,294	$3,388	20.2%	+2.9%
The Hobbit	$3,228	$2,744	16.4%	-15.0%
Marvel Super Heroes	$1,288	$1,124	6.7%	-12.7%
Reality Fracture	$792	$572	3.4%	-27.8%
Secret Lair x MSCHF	$413	$480	2.9%	+16.1%
Other collectibles	$190	$281	1.7%	+47.6%
March of the Machine	$147	$161	1.0%	+9.5%
Pokemon	$145	$145	0.9%	+0.0%
Marvel's Spider-Man	$78	$95	0.6%	+21.1%

Crossover sets carry the book. Vintage and legacy sealed is the ballast: older, thinner traded, and far less exposed to a new print run.

0 2

The investment case

Fixed supply, a float that only falls, and an audience arriving from outside the game.

01
The flywheel

02
The layers of the market

03
What has to be true

URZA
TOWER

The float only moves one way

How the return is actually produced

A print run closes

The publisher stops making a set. From that day the number of sealed boxes in existence can only fall.

SUPPLY FIXED

→

Boxes get opened

Players and collectors open product to get the cards. Every box opened leaves the sealed float permanently and cannot rejoin it.

FLOAT SHRINKS

→

The audience widens

Films, games and crossover sets bring buyers who never played, bidding for the same shrinking float.

DEMAND BROADENS

→

Price carries the adjustment

With supply fixed and float falling, the only variable left that can move is price.

THE RETURN

WHAT BREAKS THE LOOP

A reprint. It is the one event that adds supply after the run has closed, and it is why the book spreads entries across sets and release cycles rather than concentrating in the most obvious one.

WHY THIS IS NOT A STORY ABOUT CARDS

The single cards inside the box are a separate market with its own supply, and they can be reprinted individually. The sealed box is the only wrapper whose contents are fixed at the moment the run ends.

The layers of this market

Where the book sits, and what each layer is for

ENTRY LAYER

Packs

The smallest unit. Cheap entries, wide availability, the most exposed to reprints and the easiest to sell one at a time.

LIQUID CORE

Boxes

Play and set boosters. The liquid middle of the market, priced daily by the feed, where most public price history exists.

CONVEXITY

Collector displays

Premium print, smaller runs, the layer that has carried the strongest moves and the sharpest drawdowns in this book.

BALLAST

Out-of-print sealed

Vintage packs, tournament packs, starter and theme decks. Thin, slow and the least exposed to a new print run.

LAYER	POSITIONS HELD	COST	MARKED	RETURN
LOTR: Tales of Middle-earth	8	$3,142	$7,751	+146.7%
Vintage / Legacy sealed	19	$3,294	$3,388	+2.9%
The Hobbit	11	$3,228	$2,744	-15.0%
Marvel Super Heroes	4	$1,288	$1,124	-12.7%
Reality Fracture	2	$792	$572	-27.8%
Secret Lair x MSCHF	4	$413	$480	+16.1%
Other collectibles	1	$190	$281	+47.6%
March of the Machine	1	$147	$161	+9.5%
Pokemon	1	$145	$145	+0.0%
Marvel's Spider-Man	1	$78	$95	+21.1%

Strategy buckets are the fund's own grouping, not an industry classification. Positions listed are held today and are not a recommendation to buy any product.

What has to be true

The case stated as conditions rather than forecasts

251	+46.2%	+226.1%	0
BOXES PRICED	**THE MARKET**	**THE BOOK**	**POSITIONS SOLD**
in the index the book is measured against	since inception, price only	same period, same price source	every gain shown is unrealised

WHAT HAS TO BE TRUE FOR THIS TO WORK

- Print runs keep ending, and the publisher keeps choosing scarcity over supply in at least part of the range.
- Sealed product keeps being opened, so the float keeps falling faster than interest fades.
- Crossover sets keep recruiting buyers from outside the game.
- A public price feed keeps existing, so the asset can be marked rather than guessed.

WHAT WOULD PROVE IT WRONG, AND HOW IT WOULD SHOW UP FIRST

- A set continues to fall after the product has fully arrived, which is a demand reading rather than a supply one.
- Dealer bids widen away from dealer asks across several sets at once.
- The gap between listed prices and completed sales grows.
- New releases stop clearing at all. That is the signal the book watches monthly.

These are conditions, not forecasts. No projection of future value appears anywhere in this deck, because a book this size has no basis for one.

0 3

The strategy

Buy scarcity in small dated entries, price it honestly, and never be forced to sell.

01
Mandate

02
Investment process

03
Valuation policy

04
Risk management

URZA
TOWER

Mandate

What the book is allowed to hold

MANDATE

Strategy	Long-only sealed trading card product
Universe	Magic: The Gathering, Universes Beyond and others
Instruments	Booster boxes, collector displays, packs, decks, bundles
Holding period	Indefinite. No position has been sold
Leverage	None. Self-funded
Base currency	USD
Inception	2024-11-01, first acquisition 2024-06-06
Valuation	Daily, public marketplace prices

WHAT THE BOOK BUYS

- **Crossover sets** with an audience outside the game, where demand is not only from players.
- **Vintage and legacy sealed**, out-of-print packs, tournament packs, starter and theme decks.
- **Small, dated entries** rather than single large allocations, so the entry price is an average across a cycle rather than one print.

WHAT IT WILL NOT DO

- Open product. The moment a box is opened it stops being the asset that was bought.
- Borrow. There is no leverage and no redemption pressure, so a drawdown never forces a sale.
- Mark to an opinion. A position with no observed price is carried at cost.

Investment process

From sourcing to the daily mark

01

Source

Retail, marketplace and pre-order channels are watched for product below the level the price feed shows. Every order is captured with its number, seller and all-in cost.

02

Underwrite

A set is judged on audience outside the game, print window, and how much of the float is likely to be opened. Reprint exposure is written down before the purchase, not after.

03

Size

Entries are small and dated. No single acquisition is allowed to set the cost basis of a bucket, so the book averages across a release cycle.

04

Mark

Every position is repriced daily from the public market feed, with the same method used for the benchmark. Nothing is estimated.

05

Hold and monitor

Positions are held indefinitely. Reprint announcements, set rotations and float data are monitored, and a broken thesis is written up in a letter rather than quietly dropped.

THE DISCIPLINE THAT MATTERS

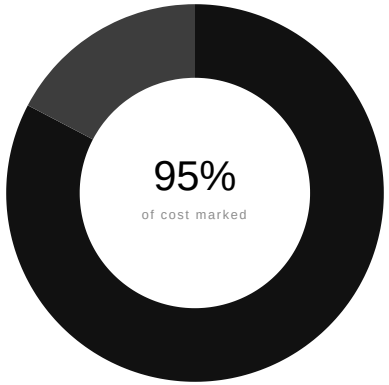

Cost is recorded all-in, after discount, shipping and tax. A book that records the sticker price and ignores the tax flatters itself by a few percent on every entry, and that error compounds through the whole track record.

CAPACITY

The strategy is small by construction. Sealed product trades in a retail marketplace, so size is limited by what can be bought without moving the ask and sold without clearing the bid. Average capital at risk since inception is $2,361.

Valuation policy

How every position is priced

OF POSITIONS

- Marked to observed prices **82.7%**
- Carried at cost **17.3%**

Positions marked	43 of 52
Carried at cost	9
Cost basis marked	94.6%
Last mark	2026-10-10

VALUATION POLICY

- A position is marked only from the transaction-derived market price for its product, latest observation per item, from the same public feed that builds the benchmark.
- Dealer retail and dealer buylist are an ask and a bid, not a market price, and are never substituted.
- A product the feed does not cover is carried at cost and flagged, never estimated.
- Where a product has no sale history at all, such as a presale, the position may be marked to the lowest public ask and is labelled as an ask in the ledger.

WHY THIS IS STRICTER THAN IT NEEDS TO BE

An earlier version of this book valued positions by applying a growth rate to cost and flooring the result at cost, which made a loss arithmetically impossible. That method was deleted. Everything in this deck comes from observed prices or is shown at cost.

Risk management

What can go wrong, and what is done about it

TRACKED PER SET

Reprint risk

The main hazard. A reprint resets the price of sealed product, so exposure is spread across release cycles and tracked per set.

TOP POSITION 42.7%

Concentration

The largest position is 42.7% of marked value and the largest bucket 46.3%. Concentration is disclosed rather than smoothed.

MARK IS GROSS OF EXIT COST

Liquidity

Sealed product trades retail. An exit carries marketplace fees, shipping and time, none of which are in the mark.

9 AT COST

Marking risk

9 positions are carried at cost and one product is marked to an ask. Those are not transaction prices.

SEALED, GRADED ON SIGHT

Physical risk

Condition, storage, theft and damage. This is inventory, not a security, and it has to be kept as well as owned.

ONE COUNTERPARTY TO THE ASSET

Single publisher

Most of the book depends on decisions taken by one publisher: print runs, reprints and set design.

No leverage and no outside capital means no forced selling, which is the only real defence a collectible book has during a drawdown. The maximum drawdown since inception is -8.4%.

0 4

Track record

+226.1% since inception against +46.2% for the sealed market, all of it unrealised and all of it published daily.

1 year	+65.7%	+27.2%	+38.5%
Since inception	+226.1%	+46.2%	+179.9%

WHAT THE RECORD IS, AND IS NOT

Returns are time-weighted, so capital added later never counts as performance. They are unrealised: no position has been sold since inception, and an exit would carry fees, shipping and tax. There are no management or performance fees to deduct, because there is no outside capital.

Performance

NAV per unit against the benchmark, base 100

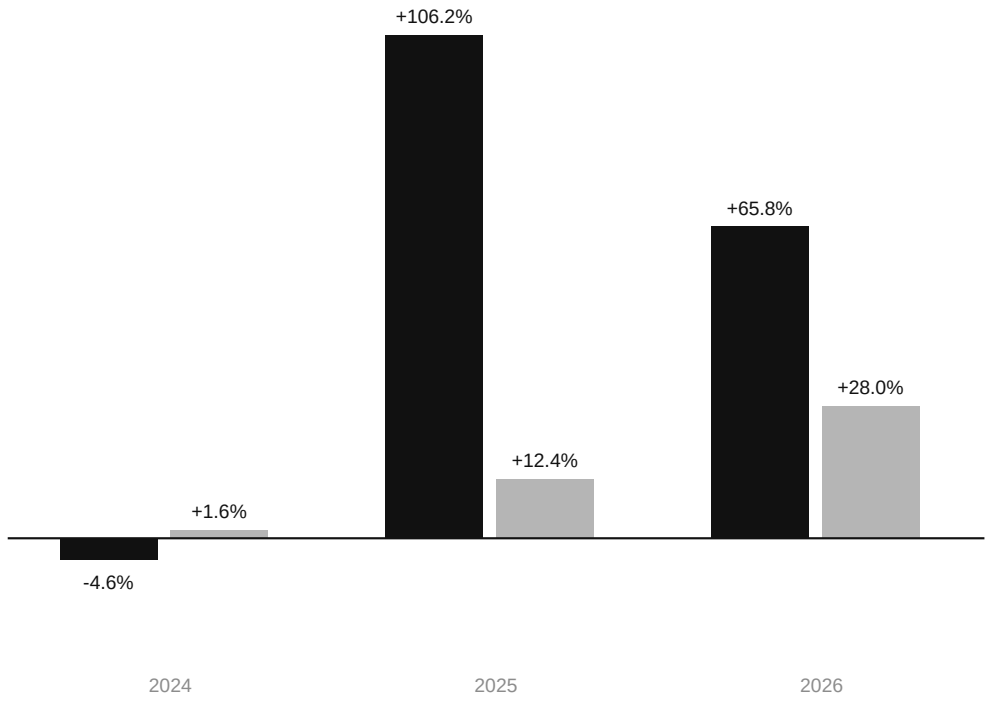

NAV per unit against the Sealed Magic booster box index, both rebased to 100 at inception on 2024-11-01. A position joins the line at its first observed price, so an entry is never a jump, and periods are measured only across positions priced at both ends of them.

Monthly returns

Book and benchmark, calendar months

YEAR	JAN	FEB	MAR	APR	MAY	JUN	JUL	AUG	SEP	OCT	NOV	DEC	YEAR

Capital deployment

Invested capital against marked value

YEAR OF PURCHASE	CAPITAL DEPLOYED	SHARE
2024	$97	0.8%
2025	$2,668	21.0%
2026	$9,952	78.3%
Total	**$12,718**	**100.0%**

DEPLOYMENT DISCIPLINE

Capital is committed in small dated entries rather than single allocations, so the cost basis is an average across a cycle. Average capital at risk since inception is $2,361, against $12,718 deployed today, and the money-weighted return on that capital is +75.9% a year.

CONTRIBUTOR

The Lord of the Rings: Tales of Middle-earth Special Edition Collector Booster Box

LOTR: Tales of Middle-earth · acquired 2025-09-29 · held 376 days

ALL-IN COST	MARKED VALUE	PROFIT AND LOSS	WEIGHT
$2,592	$7,144	$4,552	42.7%
1 unit(s)	latest observation	+175.6%	of marked value

WHAT THE POSITION SHOWS

A crossover set bought while the product was still on shelves, held through the reprint window and marked against the same public feed that prices the rest of the book. The gain is unrealised: nothing has been sold, and the exit would carry marketplace fees and shipping.

HOW IT IS HANDLED FROM HERE

- Held. There is no sale target and no obligation to sell, so the position stays until the thesis breaks.
- Reprint risk on LOTR: Tales of Middle-earth is tracked per set and is the single event that would change the view.
- The mark is refreshed daily and published, so this slide is never an old number.

DETRACTOR

Reality Fracture Collector Booster Box

Reality Fracture · acquired 2026-09-07 · held 33 days

ALL-IN COST	MARKED VALUE	PROFIT AND LOSS	WEIGHT
$642	$432	-$210	2.6%
1 unit(s)	latest observation	-32.7%	of marked value

WHAT THE POSITION SHOWS

A recent entry marked below its all-in cost. Pre-orders and newly released product are the most volatile part of the book, because the market prices a print run before anybody knows how deep it is. The position is held, not averaged down, and the mark moves with the feed rather than with an opinion.

HOW IT IS HANDLED FROM HERE

- Held. The entry was sized small and dated, so a drawdown on it does not force any other decision.
- Reprint risk on Reality Fracture is tracked per set and is the single event that would change the view.
- The mark is refreshed daily and published, so this slide is never an old number.

2,782 with live prices	daily vendor prices	each with its own index	published with the fund site

THE TERMINAL BEHIND THE MARKS

The book is priced by infrastructure built for it: a price lake that collects vendor and marketplace observations every day, a set of indices computed from that lake, and a public terminal that exposes both. The benchmark in this deck is produced by the same code that draws the terminal's indices, so the fund cannot mark itself against a number nobody else can see.

The terminal is public at urzatower.github.io/capital/terminal. Anyone reading this deck can open it and check a mark.

WHY IT MATTERS TO AN ALLOCATOR

- **Reproducible marks.** Every price in the book traces to a dated observation in the lake.
- **No survivorship in the benchmark.** The index takes every box the feed prices, not a chosen basket.
- **Daily cadence.** Marks, site, factsheet and letters refresh together, so no report is ever stale.
- **Auditability.** Holdings, cost, marks and method are published in full rather than summarised.

Reporting

What is published, and how often

DAILY

Fund site

Holdings, buckets, the NAV series and the monthly table, refreshed with every mark.

DAILY

Factsheet

One page, the same numbers as the site, generated from the same data.

MONTHLY

This deck

Full presentation of strategy, record and risk, rebuilt from the ledger.

PERIODIC

Letters

Written commentary on what changed in the book and in the market, published in an archive with a feed.

SEALED MAGIC BOOSTER BOX INDEX

Capped value-weighted, chain-linked index of every Magic booster box priced by TCGplayer (market price; weekly archive from 2024-02-08, daily from 2026-08-28). No box above 10% of the basket; a price that moves more than fivefold between observations is treated as an error. Rebased to the book's inception.

Constituents	251 booster boxes
First observation	2024-02-08
Rebased	100 at 2024-11-01
Since inception	+46.2%
Book against benchmark	+179.9%

WHY THIS BENCHMARK

A book of sealed product has no published index to be measured against, so the benchmark is built from the same price source that marks the book: every Magic booster box the feed covers, value-weighted with a cap so no single box drives the index, chain-linked across the boxes priced at both ends of each step.

LIMITS

- Ask-marked and uncovered positions are in the book but not in the index.
- The index is price only. It has no fees, shipping or tax, while the book's cost basis is all-in.
- It covers Magic booster boxes. Product outside that, including the non-Magic holdings, has no index.

Terms and statistics

How the book is run

FUND FACTS

Vehicle	Personal collection tracked with fund discipline
Manager	Arthur Mota
Location	Miami, Florida
Inception	2024-11-01
Reporting date	2026-10-10
Fees	None. Returns are before any fee and after all-in purchase cost
Subscriptions and redemptions	Not offered
Audit	None. Marks are reproducible from the published price source
Contact	urzatowercapital@gmail.com

BOOK STATISTICS

Positions	52
Sealed units	88
Strategy buckets	10
Invested capital	$12,717.56
Marked value	$16,740.37
Positions marked to market	43 (94.6% of cost)
First acquisition	2024-06-06
Positions sold to date	None

Risks and disclosures

What can go wrong

PRINCIPAL RISKS

- **Reprint risk.** A reprint of a set or the cards inside it can reset the price of sealed product.
- **Concentration.** The largest bucket is LOTR: Tales of Middle-earth at 46.3% of marked value; the largest position is 42.7%.
- **Liquidity.** Exiting at the marked price is not guaranteed, and fees, shipping and grading all cost money on the way out.
- **Marking.** 9 positions are carried at cost and one is marked to an ask.
- **Physical risk.** Condition, storage, theft and damage.
- **Single publisher.** Most of the book depends on decisions taken by one publisher.

IMPORTANT INFORMATION

This document describes a personal collection tracked with fund discipline. It is not an offer to sell or a solicitation to buy any security, interest or product, and it is not investment advice. No interests are available and nothing here is an invitation to invest.

Past performance is not a guide to future results. Returns shown are unrealised, calculated from public marketplace prices, and no position has been sold. Marks can move sharply, and the value of sealed product can fall as well as rise.

Figures are in US dollars as of 2026-10-10, produced automatically from the fund's own ledger and price data, and are unaudited.
